How to Complete Your Access Review

Quarterly access certification | Deadline: **Wednesday, October 14, 2026** | About 15 minutes for most store teams

Why this matters. You know what your team actually does. Auditors (PCI-DSS) require a manager to confirm that each person's system access is still needed. Access left behind after a role change or departure is how refund fraud, fake vendors, and payroll fraud happen.

Five steps

Step	What to do
1. Open	Open the packet named **packet_[your ID].xlsx**. It lists only your direct reports. If someone on it isn't yours, stop and tell IAM; don't review them.
2. Start with color	Review **red** (High) rows first, then **yellow** (Medium). The *flags* column says what's wrong.
3. Decide every row	Pick **Keep** or **Revoke** from the dropdown in the Decision column. Blank rows count as incomplete.
4. Justify flagged Keeps	If you Keep a flagged row, write **why** and **until when** in Justification. Unjustified Keeps are sent back.
5. Sign and return	Type your name and today's date in the blue attestation boxes, save, and return the file by the deadline.

What the flags mean

Flag	What it means	Usual decision
Terminated User - Active Access	HR shows this person left, but the account still works.	**Revoke.** Tell IAM if you think HR is wrong.
Separation of Duties	One person holds two duties that should be split (e.g. issue refunds *and* approve the cash count that would reveal them).	Revoke one of the two. Keep only with a named second reviewer.
Excess Privilege	A cashier or associate holds manager-level rights (price override, cash reconciliation, store admin).	Revoke, unless covering for you with an end date.
Inactive Account (90+ days)	No login in over 90 days.	Revoke. It can be re-requested when needed.
Orphaned Account	No HR record matches. Reviewed by IAM, not by managers.	n/a

Writing a good justification

Accepted	Sent back
"Covers night shift as acting lead through 2026-11-30. HR ticket HR-1042."	"Needed" / "OK" / "Approved"
"Seasonal; returns Nov 15. Disable until then is fine."	"Has always had this"
"Refund and reconciliation split: district manager co-signs counts weekly."	Copying the same text onto every row

Please don't

- **Keep everything to finish fast.** 100% Keep with flagged items is detected automatically and escalated to your district manager.
- **Forward, print, or email the packet outside the company.** It contains employee data and is Confidential.
- **Delete or add rows.** Packets are checked against what was sent; edited packets are rejected.

What happens next: each Revoke becomes a remediation ticket. IT removes the access and attaches proof. You don't need to do anything else. **Questions?** Contact IAM Governance (fictional contact for this demo).
